

Inter-University National AI Hackathon: Rules & Regulations

Welcome to the Inter-University National AI Hackathon hosted by the **Bahria School of Engineering and Applied Sciences**. This is a two-day event:

- Day 1: Development and Submission.
- Day 2: Project Demonstrations.

1. Team Composition & Eligibility

- **Team Size:** Each team must consist of 2–3 students. Solo participants or teams with 4 or more members are not permitted.
- **Eligibility:** Open to students currently enrolled in BSAI, BSCS, BS Electrical Engineering, or other relevant fields.
- **Registration:** Teams must submit names, university affiliations, and student IDs before the deadline. No changes to team rosters are allowed once the event begins.

2. Problem Statement & Deliverables

- **Timeline:** The problem statement will be released to all teams at the start of the event. Teams have exactly 6 hours from the release time to their final code commit.
- Participants will be enrolled in Google Classroom before the start of the event, and the problem statement will be assigned to them.
- **Submission Requirements:**
 1. A working AI/ML prototype.
 2. A functional User Interface (web, mobile, or desktop).
 3. A 3-minute video/live demo.
 4. A link to the code repository.
 5. A README file containing setup instructions.
- **Deadlines:** Late submissions will result in immediate disqualification. All repository commits will be verified via timestamps.

3. Technical Guidelines & Development

- **Core Technology:** The solution must utilize AI/ML models, APIs, or custom training. Projects relying solely on rule-based logic will be disqualified.
- **Resources:** Participants may use any programming language or framework, public APIs, and pretrained models. The use of AI assistants (e.g., GitHub Copilot, ChatGPT, etc) for coding is permitted.

- **Code Integrity:** While basic templates are allowed, the core logic must be developed during the 6-hour window. Bringing pre-built, full-scale projects is strictly prohibited.
- **Connectivity:** Internet access is allowed for documentation and APIs. However, outsourcing work to individuals outside the team is forbidden.

4. Code of Conduct & Originality

- **Originality:** Any instance of plagiarism or hiring freelancers will lead to immediate disqualification.
- **Data:** Participants must use the datasets provided by the organizers.
- **Collaboration:** No collaboration is allowed between competing teams. Mentors are not permitted to assist with code during the event.
- **Interaction:** Teams may designate one member to step away or interact for a maximum of 5 to 10 minutes during the hackathon if necessary.
- **Professionalism:** Respectful behavior is mandatory. Harassment or sabotage of other teams will result in removal from the venue.

5. Intellectual Property (IP) & Final Decisions

- **Ownership:** Teams retain the Intellectual Property of their projects. However, organizers reserve the right to showcase projects for promotional purposes.
- **Submission Portal:** Submissions must be made via the designated Google Classroom form before the deadline.
- **Finality:** The decisions made by the judges and organizers are final and binding.

6. Judging Criteria

Criteria	Focus
Problem Solving & AI Use	How effectively the AI/ML model addresses the core problem statement.
UI/UX & Interface	A clean, usable interface that effectively demonstrates the AI's capabilities.
Technical Execution	Code quality and the ability of the prototype to run without major bugs.
Innovation & Creativity	The use of a novel approach or the inclusion of unique features.
Presentation & Demo	A clear 3-minute pitch covering the problem, solution, and potential impact.

7. Required Participant Resources

- Laptops and chargers.
- Power extension cords.
- Student IDs and CNICs.
- Necessary software pre-installed.
- Personal internet resources (Optional; Wi-Fi will be provided at the venue).
